Product Support Status Notice

Product: CBORD billing gateways
Part Number: PUP5-DH-CBGATE and PUP5-DH-DBGATE
Affected Regions: Worldwide
Notice Date: 25th June, 2008
This notice supersedes a CBORD billing gateway notice dated 19th June 2008.

Pharos Systems and CBORD have recently entered into a new partnership. As part of this partnership, Pharos will be developing new gateways to the CBORD Odyssey and Gold products. As a result of this development, changes have been made to billing and operating procedures as well as to the supported gateway options. These changes apply to both Pharos' CBORD Odyssey and Gold products. (This change also includes existing Diebold gateways as CBORD Group acquired Diebold Card Systems Division in 2005).

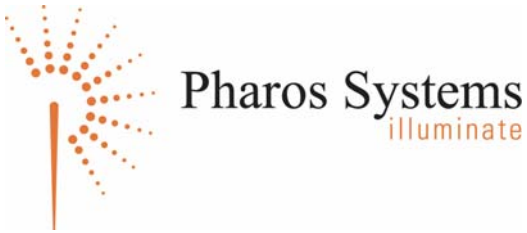

The key changes are listed below:

CBORD Odyssey gateways

- Effective immediately, all previous versions of the CBORD Odyssey serial gateway are no longer available for sale or installation.
- Pharos has developed a new CBORD Odyssey gateway. The new gateway (compatible with Uniprint 7.2 and Uniprint 8.0) uses a TCP/IP based protocol for simplified deployment as well as increased transaction throughput. Pharos is currently completing the distribution package for the new gateway. This is expected to be available in mid to late July 2008.
- Once the new Odyssey gateway is released, customers using a prior gateway will need to upgrade to the new gateway as soon as possible. The support status for these obsolete gateways will be changed to the "Mature" support status level upon the release of new gateway.
- CBORD Odyssey customers can register to receive the new gateway when it is available. Please send your contact information to support@pharos.com.

CBORD CS Gold gateways

- Effective immediately, all current CS Gold (traditional Diebold) gateways (ETI, ICAM, UTI) are no longer available for sale or installation. Any sales opportunities for the ETI gateway prior to the availability of the new CS Gold gateway (see below) will require the pre-approval of CBORD.
- Pharos is currently developing a new CS Gold gateway. The new gateway uses a TCP/IP based protocol and will be compatible with Uniprint 7.2 and Uniprint 8.0. The new gateway is expected to be available in late July 2008.
- Once the new CS Gold gateway is released, customers using a prior gateway will need to upgrade to the new gateway as soon as possible. The support status for these obsolete gateways will be changed to the "Mature" support status level upon the release of new gateway.
- CBORD CS Gold customers can register to receive the new gateway when it is available. Please send your contact information to support@pharos.com.

Licensing

- Customers and resellers can purchase the new CBORD gateways for \$2,500 SRP plus annual support and maintenance. Fees that may be required to license the gateways in the CBORD systems are handled directly by CBORD; please contact CBORD for pricing and additional information.
 - Existing customers that have purchased a license for prior CBORD Odyssey or CS Gold (Diebold) gateways will be provided the new respective Pharos gateway at no charge. Pharos support fees will be charged to all customers using either gateway. Please contact CBORD to determine if there are any upgrades or fees required to enable the new gateway in their solution.
