

PHAROS PRINT-AT-HOME

Gain visibility and control over employees' at-home printing.

COVID-19 lockdowns turned the corporate world on its head and provided companies with a new perspective on what was possible with employees working from home. What used to be handled in the office now happens anywhere employees call the office. Even as employees return, many are choosing flexible work arrangements where they can work from home and return to the physical office part-time. With flexible arrangements and the increasingly remote workforce here to stay, organizations today must be able to support the printing needs of their remote employees to stay productive, while addressing the new challenges presented by the remote workforce around security, data visibility, and support.

Pharos Print-at-Home is built on the Pharos Cloud print management platform and provides companies with visibility and management of employees' at-home printing—with or without a VPN connection. Remote employees can print to devices on their home network in a way they're familiar with—select the printer and the documents are printed immediately—but companies are provided visibility and control over the at-home printing behavior of their employees.

Intuitive work-from-home printing

- Gain visibility into what employees print at home—even from locally attached printers
- Manage the ability for employees to add and print to personal printers on their home network from their company computer without modifying access controls
- Reduce costs by controlling what employees can print and educating employees of mindful printing habits with the Policy Print option

Drive IT efficiency

- Reduce Help Desk time supporting unfamiliar print devices by providing a consistent print driver experience to at-home printers, regardless of manufacturer
- Enable approved employees to easily add printers on their own

Enhance security

- Deliver secure, remote printing—with or without VPN—through a platform supporting zero trust security principles
- Prevent remote employees from printing documents containing sensitive information by restricting what they can print
- Secure data with end-to-end encryption
